

clear

CASE STUDY

A Major Manufacturing Company successfully transformed data for e-Invoicing without ERP integration using Clear

By providing a state-of-art solution with a custom-built tool

About the company

Industry

Manufacturing

Product/Services

Machinery & Equipments

Company Headquarters

South Korea

Area served

India & International

Quick Stats

INR 1000+ Cr

Annual Turnover

14

Number of GSTINs

20,000+

Annual invoice count

The Impact

- Saved 600+ hours of manpower per year, resulting in a seamless, fast and error-free e-Invoice generation
- 250+ smart rules created for transformation
- 200+ ERP data types mapped for e-Invoicing
- 10+ fields missing in ERP auto calculated
- 5+ fields incorrectly formatted were corrected

The Issues

- The data fields on the company's existing invoice format were not in conjunction with the data fields of the e-invoice format.
- The company had to manually change the data fields before uploading the information to the government portal.
- Lack of error prompts and auto-correction features for invoice fields and line items during ingestion
- Impact on business continuity

How Clear helped

Ran a detailed data analysis of all the data maintained in the ERP versus data required for e-invoice generation

Built a customised tool to cover the gaps between the formats of the client's ERP and the Invoice Registration Portal (IRP)

Undertook advanced data transformation in approx 15 data points and used more than 250+ custom logics
